Experience

SENIOR REACT ENGINEER, CONTRACTS WITH VARIOUS STARTUPS – 2016 - PRESENT

- Guided engineering teams to implement best practices and coding standards.
- Implement various technologies such as React, Node.js and MongoDB.
- Worked with startup executives to demonstrate products, receive customer feedback and triage development needs.
- Redesigned existing systems and improved existing codebases to improve application efficiencies.
- Worked on both engineering projects and marketing strategies to increase web presences.

SOFTWARE CONFIGURATION ENGINEER, CHROME RIVER TECHNOLOGIES – 2015 - 2017

- Responsible for requirement gathering, design, development and deployment of each customer's instance as per each client's internal financial requirements and goals using Java, JSON and HTML.
- Provided training to customers and other professional members of the implementation team to define business rules, resolve issues, and test configurations.
- Used issue tracking systems to detect, track, and/or analyze problems of existing systems
- Recognized for highest weekly scores within entire department for customer implementation metrics.
- Worked with QA testers, software engineers, and DBA's to troubleshoot issues in multiple environments.
- Established best practices and business processes to ensure accurate and efficient deployments.

PROJECT MANAGER, PORTO'S BAKERY – 2014-2015

- Oversaw development and maintenance of Drupal website for menus and announcements.
- Developed internal application for ingredient utilization and daily sales to predict revenue and staff needs.
- Created processes for internal teams and for on-boarding of new employees.
- Trained administrators and oversaw technical enrollment of employees into virgin healthcare plans.
- Extracted and compiled data for custom reports on staff utilization and operational inefficiencies.

PRODUCT MANAGER, EAGLERIDER MOTORCYCLES – 2013-2014

- Managed team of developers, designers and system administrators stationed around the world.
- Decision maker for all content, design and user experience decisions for eCommerce and rental websites.
- Led team using AGILE methodologies.
- Designed website content for search engine optimization (SEO) and search engine ads (SEM).
- Developed applications using ASP.NET, Ruby on Rails, PHP, MSSQL & MySQL.

DATACENTER ADMINISTRATOR, PEER 1 NETWORKS – 2012-2013

- Solved customer issues with server configurations and hardware both independently and within a team.
- Interfaced with both technical and non-technical customers to improve communication and reliability.
